Buehler's Backyard Boatbuilding - George Buehler 1991-01-05

Everybody has the dream: Build a boat in the backyard and sail off to join the happy campers off Pogo Pogo, right? But how? Assuming you aren't independently wealthy, if you want a boat that's really you, you gotta build it yourself. Backyard boatbuilding has its problems. Building in fiberglass is itchy, smelly, and yields a product that yachting maven L. Francis Herreshoff once called "frozen snot." Ferrocement, once all the rage, has pretty much sunk from favor, if you catch the drift. But there's still wood, right? Ah, wood. Nature's perfect material. You can build in the time-honored traditions of the Golden Age of Yachting, loving crafting intricate joints in rare tropical hardwoods, steaming swamp oak butts to sinuous

shapes, holding the whole thing together with nonferrous fastenings that cost a buck or better each. Does that sound like boatbuilding for everyperson? What about the currently fashionable wood/epoxy boatbuilding? You butter regular old wood with Miracle Whip, stick it together in the shape of a boat, and off you go, right? Epoxy works, but They don't exactly give it away; nor is it exactly a benign substance. Suiting up like Homer Simpson heading for a fun-filled day at the nuclear power plant isn't exactly the aesthetic boatbuilding experience many of us are looking for. Where does that leave us? In the capable hands of George Buehler, who honors the timeless traditions of the sea all right, but those from the other side of the boatyard tracks. Buehler draws his inspiration from centuries of workboat construction, where semiskilled fishermen built rugged, economical boats from everyday materials in their own backyards, and went to sea in them in all kinds of weather, not just when it was pleasant. Buehler's boats sail on every ocean and perform every task, from long-term liveaboards in Norwegian fjords to a traveling doctor's office in Alaska. This book contains complete plans for seven cruising boats--from a 28-foot sailboat to a 55-foot power cruiser. All the information you need is here, including step-by-step instructions honed by nearly 20 years of supplying boat plans to backyard builders--and helping them out when they get into trouble. Buehler is anarchic, heretical, and occasionally profane; his book is West Coast counterculture meets traditional hardchine workboat construction, leavened with hardnosed common sense and penny-pinching economy. This book is for those who look around them and see that much of what is done in the world today--whether in yachting or politics or economics or interpersonal relationships--is based not on logic but on conforming and meeting other people's expectations. This book is most definitely NOT about either. It is about the realization of dreams. If you believe that everyone who wants a cruising boat can have one . . . If you see beauty beneath the fish scales and work scars of a commercial fishing boat . . . If you want to build a simple, rugged, economical, good-looking cruising boat--power or sail--using everyday lumberyard materials and few skills other than perseverance, this is the book for you. Buehler's Backyard Boatbuilding tells you how to build extraordinary boats using the most ordinary skills and materials, with complete plans, instructions, and specifications for seven real cruising boats ranging from a 28-foot sailboat to a 55-foot power cruiser. "Build wooden boats the Buehler way, which is to say inexpensively, yet like the proverbial brick outhouse."--WoodenBoat Richly flavored with personal advice and anecdotes as well as a wealth of valuable information."--American Sailing Association "Everyone will revere this book."--The Ensign

Marine Diesel Engines - Nigel Calder 2003

Nigel Calder, a diesel mechanic for more than 25 years, is also a boatbuilder, cabinetmaker, and machinist. He and his wife built their own cruising sailboat, Nada, a project they completed in 1984. Calder is author of numerous articles for Yachting Monthly and many other magazines worldwide, as well as the bestselling Boatowner's Practical and Technical Cruising Manual and Boatowner's Mechanical and Electrical Manual, both published by Adlard Coles Nautical. Here, in this goldmine of a book, is everything the reader needs to keep their diesel engine running cleanly and efficiently. It explains how diesel engines work, defines new terms, and lifts the veil of mystery that surrounds such engines. Clear and logical, this extensively illustrated guide will enable the reader to be their own diesel mechanic. As Nigel Calder says: 'there is no reason for a boatowner not to have a troublefree relationship with a diesel engine. All one needs is to set the engine up correctly in the first place, to pay attention to routine maintenance, to have the knowledge to spot early warning signs of impending trouble, and to have the ability to correct small ones before they become large ones.'

Court Patronage and Corruption in Early Stuart England - Linda Levy Peck 2003-08-29

Cruising World - 1987-07

No Good Alternative - William T. Vollmann 2018-06-05

"The most honest book about climate change yet." —The Atlantic "The Infinite Jest of climate books."
—The Baffler An eye-opening look at the consequences of coal mining and oil and natural gas production—the second of a two volume work by award-winning author William T. Vollmann on the ideologies of energy production and the causes of climate change The second volume of William T. Vollmann's epic book about the factors and human actions that have led to global warming begins in the coal fields of West Virginia and Eastern Kentucky, where "America's best friend" is not merely a fuel, but a "heritage." Over the course of four years Vollmann finds hollowed out towns with coal-polluted streams and acidified drinking water; makes covert visits to mountaintop removal mines; and offers documented accounts of unpaid fines for federal health and safety violations and of miners who died because their bosses cut corners to make more money. To write about natural gas, Vollmann journeys to Greeley, Colorado, where he interviews anti-fracking activists, a city planner, and a homeowner with serious health issues from fracking. Turning to oil production, he speaks with, among others, the former CEO of Conoco and a vice president of the Bank of Oklahoma in charge of energy loans, and conducts furtive roadside interviews of guest workers performing oil-related contract labor in the United Arab Emirates. As with its predecessor, *No Immediate Danger*, this volume seeks to understand and listen, not to lay blame—except in a few corporate and political cases where outrage is clearly due. Vollmann is a carbon burner just like the rest of us; he describes and quantifies his own power use, then looks around him, trying to explain to the future why it was that we went against scientific consensus, continually increasing the demand for electric power and insisting that we had no good alternative.
