Carpentry Fundamentals - Glenn Baker 1981

Carpentry - W. Powell 2016

Ritten in simple terms with an emphasis on discipline nomenclature, professionalism, and articulation of content, Carpentry is among the first texts to integrate a full set of building plans with the 2015 International Code Council building standards, and the latest carpentry text built around the ideals of modern and sustainable construction methods. Fully conceived, designed, and written to help develop the first generation of carpenters and builders of tomorrow s highly efficient green homes, the book is based on building science and the latest materials and techniques. The mathematics, theory, practice, techniques, and applications of carpentry are interwoven

within a larger discussion of sustainability, resource and labor efficiencies, indoor air quality, and environmental impact. The book develops building skills that go beyond technique by explaining purpose, code compliance, structure requirements, and introducing plan reading spatial skills.

Carpentry for Beginners - Charles Harold Hayward 2009-05-12

REPRINT. pp.200. B & W illustrations. This book is intended for the home craftsman who wants to make all sorts of things in wood from a table lamp to a rabbit hutch. To the tradesman carpentry refers to the constructional woodwork

of a house-the roof, flooring, and so on. To the man in the street, however, it generally means the making of almost every thing in wood; hence the general character of the designs we give. We give a range of comparatively simple designs for objects to make which we know from experience to be in everyday demand; small general items, pieces of furniture, and garden woodwork. These are followed by instructions on the use of tools, and the everyday processes involved in woodwork-making doors, hinging, fitting locks, and cutting joints.
