Excerpt from Contributions to Cardiac Pathology The following papers, scattered through the journals, are here collected, with a few notes and alterations. Some questions they more or less incidentally discussed, would seem yet to await a final answer. For example, whether all the elements are found for a thoroughly satisfactory explanation of the first sound of the heart; the precise period of cardiac revolution, during which injection of the coronary arteries takes place; whether data are furnished for possible diagnosis in transposition of the great vessels of the heart 3 whether presystolic murmur may not, at times, be of indirect or regurgitant origin 3 and lastly, the immediate cause of death in insufficiency of the aortic valves. The signs revealed by auscultation, in some cases, still admit of more correct interpretation. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books.
