The Effects of the ASVAB Career Exploration Program on High School Students' Career Decision Self-efficacy - Mark D. Foster 2019

The purpose of this mixed-methods study was to better understand the effects the Armed Services Vocational Aptitude Battery Career Exploration Program has on 10th, 11th or 12th grade high school students' confidence in making career-related decisions following participation in the program. The Career Decision Self-Efficacy-Short Form (CDSE-SF), surveys, and focus group conversations were used to gather data. A pre- and post-test was a key part of this study's design and results of a paired sample t-test revealed that participation in the program had a statistically significant impact on the students' Career Decision Self-efficacy (CDSE). However, results of an independent t-test revealed that there was little difference in confidence levels between students that participated in the ASVAB CEP during this study and those that participated the previous school year. Schools are succeeding at providing students career-related information and career-related experiences; however, emphasis on planning students' futures, problem-solving, and creating goals may be necessary. Recommendations as a result of this study include ensuring all stakeholders are fully aware of career interventions offered in a high school and students receive their intervention results in a timely, professional manner. In addition, as part of a school's comprehensive school counseling

program, school counselors could solicit motivated teachers to become certified School Career Development Advisors to assist with meeting students' career-related needs. Lastly, a range of career-related experiences for all students such as work-based learning, post-secondary enrollment options and a modern CTE program, could assist students with gaining the confidence required for making good career-related decisions.

Teach Yourself How to Learn - Sandra Yancy McGuire 2018-01-31

Following up on her acclaimed *Teach Students How to Learn*, that describes teaching strategies to facilitate dramatic improvements in student learning and success, Sandra McGuire here presents these “secrets” direct to students. Her message is that “Any student can use simple, straightforward strategies to start making A’s in their courses and enjoy a lifetime of deep, effective learning.” Beginning with explaining how expectations about learning, and the study efforts required, differ between college and secondary school, the author introduces her readers, through the concept of metacognition, to the importance and powerful consequences of understanding themselves as learners. This framework and the recommended strategies that support it are useful for anyone moving on to a more advanced stage of education, so this book also has an intended audience of students preparing to go to high school, graduate school, or professional school. In a conversational tone, and liberally illustrated by anecdotes of past students, the author combines introducing readers to concepts like Bloom’s Taxonomy (to illuminate the difference between studying and learning), fixed and growth mindsets, as well as to what brain science has to tell us about rest, nutrition and exercise, together with such highly specific learning strategies as how to read a textbook, manage their time and take tests. With engaging exercises and thought-provoking reflections, this book is an ideal motivational and practical text for study skills and first year experience courses.
