## **Nutritional Ecology of the Ruminant** - Peter J. Van Soest 1994

This monumental text-reference places in clear perspective the importance of nutritional assessments to the ecology and biology of ruminants and other nonruminant herbivorous mammals. Now extensively revised and significantly expanded, it reflects the changes and growth in ruminant nutrition and related ecology since 1982. Among the subjects Peter J. Van Soest covers are nutritional constraints, mineral nutrition, rumen fermentation, microbial ecology, utilization of fibrous carbohydrates, application of ruminant precepts to fermentive digestion in nonruminants, as well as taxonomy, evolution, nonruminant competitors, gastrointestinal anatomies, feeding behavior, and problems fo animal size. He also discusses methods of evaluation, nutritive value, physical struture and chemical composition of feeds, forages, and broses, the effects of lignification, and ecology of plant self-protection, in addition to metabolism of energy, protein, lipids, control of feed intake, mathematical models of animal function, digestive flow, and net energy. Van Soest has introduced a number of changes in this edition, including new illustrations and tables. He places nutritional studies in historical context to show not only the effectiveness of nutritional approaches but also why nutrition is of fundamental importance to issues of world conservation. He has extended precepts of ruminant nutritional ecology to such distant adaptations as the giant panda and streamlined conceptual issues in a clearer logical progression, with emphasis on mechanistic causal interrelationships. Peter J. Van Soest is Professor of Animal Nutrition in the Department of Animal Science and the Division of Nutritional Sciences at the New York State College of Agriculture and Life Sciences, Cornell University.

Concepts of Biology - Samantha Fowler 2018-01-07

Concepts of Biology is designed for the single-semester introduction to biology course for non-science majors, which for many students is their only college-level science course. As such, this course represents an important opportunity for students to develop the necessary knowledge, tools, and skills to make informed decisions as they continue with their lives. Rather than being mired down with facts and vocabulary, the typical non-science major student needs information presented in a way that is easy to read and understand. Even more importantly, the content should be meaningful. Students do much better when they understand why biology is relevant to their everyday lives. For these reasons, Concepts of Biology is grounded on an evolutionary basis and includes exciting features that highlight careers in the biological sciences and everyday applications of the concepts at hand. We also strive to show the interconnectedness of topics within this extremely broad discipline. In order to meet the needs of today's instructors and students, we maintain the overall organization and coverage found in most syllabi for this course. A strength of Concepts of Biology is that instructors can customize the book, adapting it to the approach that works best in their classroom. Concepts of Biology also includes an innovative art program that incorporates critical thinking and clicker questions to help students understand--and apply--key concepts.

**Creationist Diet: Second Edition Comprehensive Guide to Bible and Science Based Nutrition** - Gary Zeolla 2017-05-09

What did God give to human beings for food? What does the Bible teach about diet and nutrition? How do the Biblical teachings on foods compare to scientific research on nutrition and the relationship of diet to degenerative

disease like heart disease, cancer, stroke, diabetes, and osteoporosis? These and other questions are addressed in this book. This Second Edition is 2-1/2 times as long as the First Edition. This Second Edition also presents a different perspective on diet. The First Edition mostly advocated a vegan diet, while this Second Edition also advocates for a diet that includes animal foods. But, and this is very important, those animal foods are to be what are called "old-fashioned" meats, dairy, and eggs, not the "factory farm" products that most people eat. What is meant by these two terms and the incredible difference between them is explained in this book. Many more diet related topics are also covered, every subject imaginable about sound nutritional practices.

The Sun, Human & Food - T.H. Yellowdawn 2011-07-08

This work was the result of research and practice of the author over thirty years. Many advices of doctors and nutritionists about food combinations and diets were applied and tested, but all of that were not satisfied. At last, he recognized that the nature created human body of a self-healing system that needed to be fed with proper food, and let it alone then it could convert food into energy to manipulate hundred functions every day by itself. The symptoms were the voice of human body to tell that the wrong food and times were used. After food combination was corrected, all symptoms were vanished within a few

days. The wrong combination with acid and alkaline food created the toxic digestion leading to the symptom of malnutrition, and metabolic toxin came eroding on all organs and connective tissues. This work is a suggestion about living and working with the heating cycle of day and proper food combination that can maintain the body with good health.

*Mind If I Order the Cheeseburger* - Sherry F. Colb 2013-06-18

What about plants? Don't animals eat other animals? There are no perfect vegans, so why bother? If you're vegan, how many times have you been asked these, and other similarly challenging, questions from non-vegans? Using humor and reason, Sherry F. Colb takes these questions at face value and also delves deeply into the motivations behind them, coming up with answers that are not only intelligent but insightful about human nature. Through examples, case studies, and clear-eyed logic, she provides arguments for everything from why veganism is compatible with the world's major religions to why vegetarianism is not enough. In the end, she shows how it is possible for vegans and non-vegans to engage in a mutually beneficial conversation without descending into counterproductive name-calling, and to work together to create a more hospitable world for human animals and non-human animals alike. "A rare fusion of passion and logic, idealism and pragmatism, style and substance, and--in its measured confrontation of the most challenging questions vegans face--a revolutionary guide for advocates seeking to engage the ethics of eating animals through authentic dialogue rather than bombastic rhetoric. Colb's literary touch is something to behold. She writes in a way that will appeal to non-vegans and vegans alike, building bridges across an all too turbulent divide. This is food writing at its best and food writing as it should be: honest, inclusive, inspirational, and, more than you might imagine, timely."--James McWilliams, Professor of History, Texas State University, San Marcos, and author of *Just Food* and *The Politics of the Pasture* "With compassion, humor, and eloquence, Sherry Colb provides a clear and engaging account of what motivates vegans to eat and live the way we do. A must-read for anyone who has ever wondered (or been asked) 'Why do vegans think it is okay to kill plants but not animals?' or 'Why avoid dairy and eggs?'"--Rory Freedman, New York Times bestselling co-author of *Skinny Bitch* and author of *Beg* "Sherry Colb provides thoughtful, articulate, intelligent answers to the commonly asked questions faced by every vegan. Intertwining information, reason, and her own personal experience, Colb offers an invaluable aid both for those answering the questions and for those posing them. The perfect companion"--Colleen Patrick-Goudreau, bestselling author and creator of *The 30-Day Vegan Challenge* "A powerful, compelling, and thoroughly engaging defense of veganism from an absolutely terrific legal scholar."--Gary L. Francione, Board of Governors Professor of Law and Katzenbach Distinguished Scholar of Law and Philosophy, Rutgers University, author of *Introduction to Animal Rights: Your Child or the Dog?* "With crystal clear logic and an empathic voice, Sherry Colb has written a must-read source for anyone curious, skeptical, or downright antagonistic towards vegan living. This book is destined to be a classic of the emerging vegan oeuvre."--Jonathan Balcombe, Ph.D., author of *The Exultant Ark* "Full of thoughtful analyses of some of the most common, perplexing, and often challenging reactions to vegans and veganism. Any vegan or vegetarian who has wished they'd had a more informed response to a question or challenge about their ideology--and anyone who wants to better understand some of the fundamental concepts of veganism--will benefit from reading Sherry Colb's in-depth exploration of the issues."--Melanie Joy, Ph.D., author of *Why We Love Dogs, Eat Pigs, and Wear Cows*

**Waking Up from the Cancer Trance** - Judith Lee Dew 2019-01-23

• Ignorance about cancer can be fatal, expensive, and wholly unnecessary. • There are books on gentle, effective cancer care, but none of them tell the truth about our uniquely individual needs. • This book is as close to the whole truth as possible and includes the works of the great geniuses who healed cancer patients with remarkable results. • It also includes doctors and hospitals where healing cancer patients is not a crime. • I cured my own breast cancer but didn't stop researching until I found what was necessary to help all the others find their way. • Cancer is still a mystery, because the cancer industry does not want you to know that it is not a mystery. • Cancer prevention should be common knowledge, but it won't be until it is not sponsored by the conventional pharmaceutical industry. • Cancer care is at least a hundred years behind where it should be. • There will come a time when we will wake up and demand that individual cancer care be proven by large-scale clinical trials.
