The Storyteller - Raymond Christian 2013-02

The train appears a little dark in color and mysterious. Its boxcars have titles like spray-painted graffiti on its walls, with their doors half open with a dark, mysterious interior. As you are now stuck in traffic and look into one of the slightly open doors of one of the boxcar's dark portions, a familiar face emerges from the shadows. Unfamiliar sights and sounds begin to occur around you. The train continues to very slowly move forward. From another boxcar, you hear a prophetic voice calling your name from the darkness. You look, but no one is there. Like a slow-moving train, author Raymond Christian presents a number of stories to his readers. Each story passes on the tracks and allows the reader a peek inside the car. In each car lies wisdom and truth. Readers can use this book a resource for Bible studies, small groups, and even simply as entertainment. Read Raymond Christian's *The Storyteller* for a deeper look into your faith and the power of the story.

Not by Design - John Reiss 2009-08-10

More than two centuries ago, William Paley introduced his famous metaphor of the universe as a watch made by the Creator. For Paley, the exquisite structure of the universe necessitated a designer. Today, some 150 years since Darwin's *On the Origin of Species* was published, the argument of design is seeing a revival. This provocative work tells how Darwin left the door open for this revival--and at the same time argues for a new conceptual framework that avoids the problematic teleology inherent in Darwin's formulation of natural selection. In a wide-ranging discussion of the historical and philosophical dimensions of evolutionary theory from the ancient Greeks to today, John Reiss argues that we should look to the principle of the conditions for existence, first formulated before *On the Origin of Species* by the French paleontologist Georges Cuvier, to clarify the relation of adaptation to evolution. Reiss suggests that Cuvier's principle can help resolve persistent issues in evolutionary biology, including the proper definition of natural selection, the distinction between natural selection and genetic drift, and the meaning

of genetic load. Moreover, he shows how this principle can help unite diverse areas of biology, ranging from quantitative genetics and the theory of the levels of selection to evo-devo, ecology, physiology, and conservation biology.

Routledge International Handbook of Theoretical and Philosophical Psychology - Brent D. Slife 2021-12-29

Routledge International Handbook of Theoretical and Philosophical Psychology is a compilation of works by leading scholars in theoretical and philosophical psychology that offers critical analyses of, and alternatives to, current theories and philosophies typically taken for granted in mainstream psychology. Within their chapters, the expert authors briefly describe accepted theories and philosophies before explaining their problems and exploring fresh, new ideas for practice and research. These alternative ideas offer thought-provoking ways of reinterpreting many aspects of human existence often studied by psychologists. Organized into five sections, the volume covers the discipline of psychology in general, various subdisciplines (e.g., positive psychology and human development), concepts of self and identity as well as research and practice. Together the chapters present a set of alternative ideas that have the potential to take the field of psychology in fruitful directions not anticipated in more traditional theory and research. This handbook will be a valuable resource for students and scholars of the theory, assumptions, and history of psychology.

Internal Combustion Engine in Theory and Practice, second edition, revised, Volume 2 - Charles Fayette Taylor 1985-03-19

This revised edition of Taylor's classic work on the internal-combustion engine incorporates changes and additions in engine design and control that have been brought on by the world petroleum crisis, the

subsequent emphasis on fuel economy, and the legal restraints on air pollution. The fundamentals and the topical organization, however, remain the same. The analytic rather than merely descriptive treatment of actual engine cycles, the exhaustive studies of air capacity, heat flow, friction, and the effects of cylinder size, and the emphasis on application have been preserved. These are the basic qualities that have made Taylor's work indispensable to more than one generation of engineers and designers of internal-combustion engines, as well as to teachers and graduate students in the fields of power, internal-combustion engineering, and general machine design.

Brain-mind - Paul Thagard 2019

"Brain-Mind presents a unified, brain-based theory of cognition and emotion, with applications to the most complex kinds of thinking, right up to consciousness and creativity. Unification comes from systematic application of Chris Eliasmith's powerful new Semantic Pointer Architecture, a highly original synthesis of neural network and symbolic ideas about how the mind works. Thagard will show the relevance of semantic pointers to a full range of important kinds of mental representations, from sensations and imagery to concepts, rules, analogies, and emotions. Neural mechanisms can then be used to explain many phenomena concerning consciousness, action, intention, language, creativity, and the self. Because of their broad importance, Thagard has tried to make Eliasmith's ideas accessible to a broad audience with no special background in neuroscience or mathematics. The value of a unified theory of thinking goes well beyond psychology, neuroscience, and the other cognitive sciences"--

I Don't Have Enough Faith to Be an Atheist - Norman L. Geisler 2021-05-17

To some, the concept of having faith in a higher power or a set of religious beliefs is nonsensical. Indeed, many view religion in general, and Christianity in particular, as unfounded and unreasonable. Norman Geisler and Frank Turek argue, however, that Christianity is not only more reasonable than all other belief systems, but is indeed more rational than unbelief itself. With conviction and clear thinking, Geisler and Turek guide readers through some of the traditional, tested arguments for the existence of a creator God. They move into an examination of the source of morality and the reliability of the New Testament accounts concerning Jesus. The final section of the book deals with a detailed investigation of the claims of Christ. This volume will be an interesting read for those skeptical about Christianity, as well as a helpful resource for Christians seeking to articulate a more sophisticated defense of their faith.
