**Ecosystem Services and Global Ecology** - Levente Hufnagel 2018-09-19

The aim of Ecosystem Services and Global Ecology is to give an overview and report from the frontiers of research of this important and interesting multidisciplinary area. Ecosystem services as a concept plays a key role in solving global environmental and human ecological crises and associated other problems, especially today when the sixth major extinction event of the history of the biosphere is in progress, and humanity can easily become a victim of it. Human activity is rapidly transforming the surface of the Earth, its biosphere, atmosphere, soil, and water resources. Ecological processes happen over a long time scale, thus damage caused by human activity will be perceptible after decades or even centuries. We hope that our book will be interesting and useful for researchers, lecturers, students, and anyone interested in this field.

**Frontiers in Resource and Rural Economics** - Wu JunJie 2010-09-30

Most land in the United States is in rural areas, as are the sources of most of its fresh water and almost all its other natural resources. One of the first books to approach resource economics and rural studies as fundamentally interconnected areas of study, *Frontiers in Resource and Rural Economics* integrates the work of 18 leading scholars in resource economics, rural economics, rural sociology and political science in order to focus on two complex interdependencies—one pertaining to natural resources and human welfare, the other to urban and rural communities and their economies. The book reviews the past 50 years of scholarship in both natural resource and rural economics. It contrasts their different intellectual and practical approaches and considers how they might be refocused in light of pressing demands on human and natural systems. It then proposes a 'new rural economics' that acknowledges the full range of human-ecosystem and urban-rural interdependencies. It explores the relationship between natural resources and economic growth, and considers the prospects for amenity-driven growth that would benefit both new and traditional inhabitants of rural areas. Later chapters explore the politics of place, spatial economics, strategies for reducing rural poverty, and

prospects for linking rural and environmental governance. Throughout, the book emphasizes innovative research methods that integrate natural resource, environmental, and rural economics.

**Water ecosystem services** - Martin-Ortega, Julia 2015-04-30

"This comprehensive volume describes how ecosystem services-based approaches can assist in addressing major global and regional water challenges, such as climate change, biodiversity loss, and water security in the developing world, by integrating scientific knowledge from different disciplines, such as hydrological modelling, environmental economics, psychology and international law. Empirical assessments at the national, catchment and regional levels are used to critically appraise this systemic approach, and the merits and potential limitations are presented. The practicalities of this approach with regard to water resources management, nature conservation, and sustainable business practices are discussed, and the role of society in underpinning the concept of ecosystem services is explored. Presenting new insights and perspectives on how to shape future strategies, this contributory volume is a valuable reference for researchers, academics, students and policy makers, in environmental studies, hydrology, water resource management, ecology, environmental law, policy and economics, and conservation biology." -- Provided by publisher.
